MESSAGE TO PARENTS

This book was created based on well-published scientific findings that a newborn baby is well equipped to see and hear, even moments after birth. Their sight, however, is limited to about 8 to 10 inches from their faces and they typically can only make out shadows, shapes, and faces. They are especially interested in Mom's and Dad's faces and in patterns involving high contrast colors like black and white.

I have noticed my own newborn son analyzes the light seeping through the horizontal slat blinds by the window on sunny days and also watches the tree branches sway in the breeze from our porch. When I sing or talk softly to him during these moments, he will typically keep an interest in these patterns for longer periods of time. Hence, I created this book of visual and audible patterns for him and other newborns.

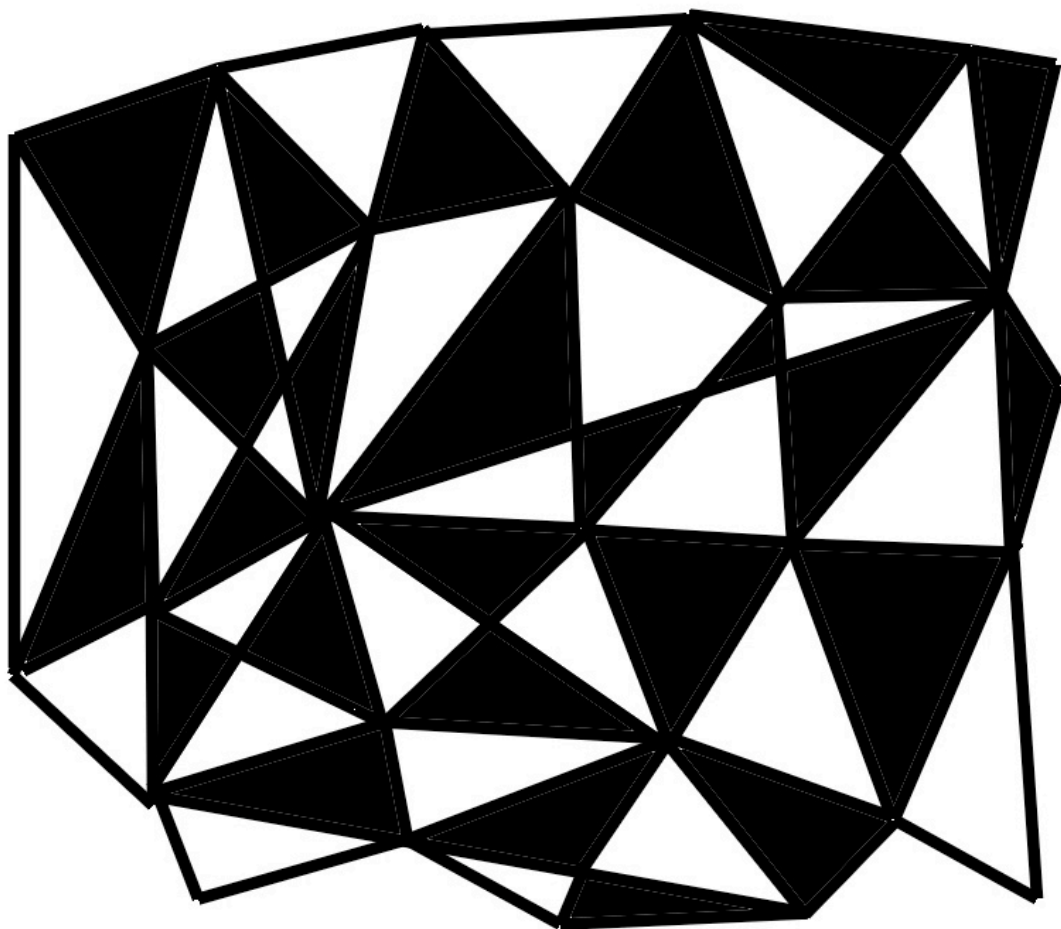

This book should provide you with another way to socialize with your newborns and to interest them in the new sights and sounds around them. When you read or sing the phrases written in this book, be sure to face the corresponding image towards your newborn. The rhythms of the verses in your familiar and soothing parental voice and the high contrasted images may well increase their attention and hone their natural desire to learn through their senses. Reading to your newborn is proven to be an important step in their development. It becomes a method of social bonding and increases their desire to learn. Even if their interest wanes after a single verse, as they grow older and become more familiar with patterns both in the images and in your voice, you may well find a new connection to your newborn. They are constantly listening and trying to identify patterns, setting the foundation for learning a new language. When I read and sing this book to my son, I see him soaking in these patterns. Even as he gets a few months older, I see him smile and giggle. And apart from any developmental reasons for this book, it is just simply a great way to spend more time with your newborn. Enjoy every moment!
